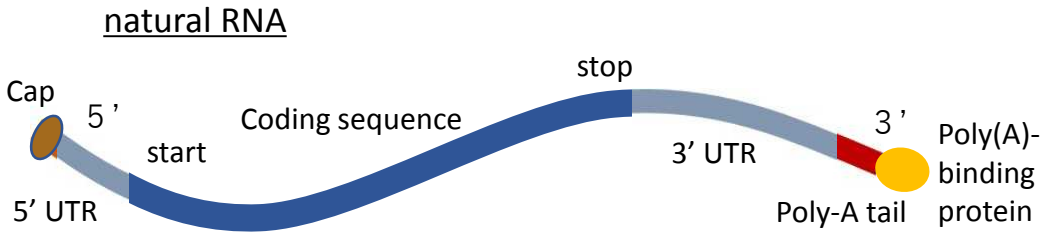
2021.6.16改訂

ファイザー社とモデルナ社のワクチンで使われているmRNA改造法

By D Weissman and K Karikó



【３つのmRNAトランスフェクション法】
- *Trans*IT™法
- リポフェクチン™法
- 脂質ナノパーティクル法
  →これがワクチンで使われている

本来のRNA	改造後のRNA
Cap: RNAの先頭を示すキャップ(帽子)構造	2’-O-methyltransferaseでcap1に改変
5’ UTR, 3’ UTR: 非翻訳領域	？？
Coding sequence: 遺伝子情報	ウリジンをpseudouridine(Ψ)に置換→免疫機構が回避でき、蛋白合成が2～10倍に
Poly-A tail: 尾部を示す200個前後のアデニン鎖	130個のアデニン鎖

【改造RNAは体内で何をするのか？】

・自然のRNAでは：
ウイルス感染→OAS(酵素)活性化→2-5A(核酸分子)合成→RNase L活性化→RNA分解が進行

・改造RNAでは：
OASを活性化しない→コロナmRNAは分解されず細胞内に残る。マウス実験では１回の注射で中和抗体が9週まで増加。memory B cellsの消長は不明。T follicular helper cells ↑ →germinal center ↑ →中和抗体↑。PKRを抑制。

【改造RNAは逆転写されるか？】

細胞内で逆転写は起こらないと考えられる

【Spike蛋白のコーディング】

full-length S protein with deleted furin cleavage site とした場合、CD4+ T cellの反応が最良

【免疫反応】

CD4+, CD8+↑ → Th1 ↑ →IFN-γ ↑ (つまりTh1細胞優位のため再感染時にアレルギー反応は起さない)

【改造の効果】

培養細胞実験で2倍長く残る。ラット実験12～78倍蛋白合成が増強。ヒトではまったく不明

ワイズマン、カリコ両氏の名前が含まれた学術文献の一覧

全部で 32 編ありますが、そのすべてを参照した上で当サイトの執筆を行っています。内容は多岐にわたり、かつ専門的です。個々の文献についてご質問があれば、メールにてお知らせください。

岡田正彦

1　Zika virus protection by a single low-dose nucleoside-modified mRNA vaccination. Pardi N, Karikó K, Weissman D, et al. Nature. 2017;543(7644):248-251.

2　Suppression of RNA recognition by Toll-like receptors: the impact of nucleoside modification and the evolutionary origin of RNA. Karikó K, Weissman D, et al. Immunity. 2005;23(2):165-75.

3　In vitro transcription of long RNA containing modified nucleosides. Pardi N, Weissman D, Karikó K, et al. Methods Mol Biol. 2013;969:29-42.

4　A Single immunization with nucleoside-modified mRNA vaccines elicits strong cellular and humoral immune responses against SARS-CoV-2 in mice. Laczkó D, Karikó K, Weissman D, et al. Immunity. 2020;53(4):724-732.e7.

5　Incorporation of pseudouridine into mRNA yields superior nonimmunogenic vector with increased translational capacity and biological stability. Karikó K, Weissman D, et al. Mol Ther. 2008;16(11):1833-40.

6　Expression kinetics of nucleoside-modified mRNA delivered in lipid nanoparticles to mice by various routes. Pardi N, Kariko K, Weissman D, et al. J Control Release. 2015;217:345-51.

7　Nucleoside-modified mRNA vaccines induce potent T follicular helper and germinal center B cell responses. Pardi N, Karikó K, Weissman D, et al. J Exp Med. 2018;215(6):1571-1588.

9　Nucleoside-modified mRNA immunization elicits influenza virus hemagglutinin stalk-specific antibodies. Pardi N, Karikó K, Weissman D, et al. Nat Commun. 2018;9(1):3361.

10 Generating the optimal mRNA for therapy: HPLC purification eliminates immune activation and improves translation of nucleoside-modified, protein-encoding mRNA. Karikó K, Weissman D, et al. Nucleic Acids Res. 2011;39(21):e142.

11 Characterization of HIV-1 Nucleoside-Modified mRNA Vaccines in Rabbits and Rhesus Macaques. Pardi N, Karikó K, Weissman D, et al. Mol Ther Nucleic Acids. 2019;15:36-47.

12 HPLC purification of in vitro transcribed long RNA. Weissman D, Karikó K, et al. Methods Mol Biol. 2013;969:43-54.

13 Incorporation of pseudouridine into mRNA enhances translation by diminishing PKR activation. Anderson BR, Weissman D, Karikó K, et al, Nucleic Acids Res. 2010;38(17):5884-92.

14 Administration of nucleoside-modified mRNA encoding broadly neutralizing antibody protects humanized mice from HIV-1 challenge. Pardi N, Karikó K, Weissman D, et al. Nat Commun. 2017;8:14630.

15 Purification of mRNA Encoding Chimeric Antigen Receptor Is Critical for Generation of a Robust T-Cell Response. Foster JB, Weissman D, Karikó K, et al, Hum Gene Ther. 2019;30(2):168-178.

16 mRNA is an endogenous ligand for Toll-like receptor 3. Karikó K, Weissman D, et al. J Biol Chem. 2004;279(13):12542-50.

17 Increased erythropoiesis in mice injected with submicrogram quantities of pseudouridine-containing mRNA encoding erythropoietin. Karikó K, Weissman D, et al. Mol Ther. 2012;20(5):948-53.

18 Naturally occurring nucleoside modifications suppress the immunostimulatory activity of RNA: implication for therapeutic RNA development. Karikó K, Weissman D. Curr Opin Drug Discov Devel. 2007;10(5):523-32.

19 Nucleoside modifications in RNA limit activation of 2'-5'-oligoadenylate synthetase and increase resistance to cleavage by RNase L. Anderson BR, Weissman D, Karikó K, et al. Nucleic Acids Res. 2011;39(21):9329-38.

20 Inhibition of toll-like receptor and cytokine signaling--a unifying theme in ischemic tolerance. Karikó K, Weissman D, et al, J Cereb Blood Flow Metab. 2004;24(11):1288-304.

21 Nucleofection induces transient eIF2α phosphorylation by GCN2 and PERK. Anderson BR, Karikó K, Weissman D. Gene Ther. 2013;20(2):136-42.

22 Identification of Cyclobutane Pyrimidine Dimer-Responsive Genes Using UVB-Irradiated Human Keratinocytes Transfected with In Vitro-Synthesized Photolyase mRNA. Boros G, Weissman D, Karikó K, et al. PLoS One. 2015;10(6):e0131141.

23 Transfection of pseudouridine-modified mRNA encoding CPD-photolyase leads to repair of DNA damage in human keratinocytes: a new approach with future therapeutic potential. Boros G, Weissman D, Karikó K, et al. J Photochem Photobiol B. 2013;129:93-9.

24 gp340 expressed on human genital epithelia binds HIV-1 envelope protein and facilitates viral transmission. Stoddard E, Karikó K, Weissman D, et al. J Immunol. 2007;179(5):3126-32.

25 Inhibition of HIV-1 infection by small interfering RNA-mediated RNA interference. Capodici J, Karikó K, Weissman D. J Immunol. 2002;169(9):5196-201.

26 Exogenous siRNA mediates sequence-independent gene suppression by signaling through toll-like receptor 3. Karikó K, Weissman D, et al. Cells Tissues Organs. 2004;177(3):132-8.

27 Short interfering RNA-mediated inhibition of herpes simplex virus type 1 gene expression and function during infection of human keratinocytes. Bhuyan PK, Karikò K, Weissman D, et al. J Virol. 2004;78(19):10276-81.

28 Small interfering RNAs mediate sequence-independent gene suppression and induce immune activation by signaling through toll-like receptor 3. Karikó K, Weissman D, et al. J Immunol. 2004;172(11):6545-9.

29 Cutting edge: innate immune system discriminates between RNA containing bacterial versus eukaryotic structural features that prime for high-level IL-12 secretion by dendritic cells. Koski GK, Karikó K, Weissman D, et al. J Immunol. 2004;172(7):3989-93.

30 Extracellular mRNA induces dendritic cell activation by stimulating tumor necrosis factor-alpha secretion and signaling through a nucleotide receptor. Ni H, Karikó K, Weissman D, et al. J Biol Chem. 2002;12;277(15):12689-96.

31　HIV gag mRNA transfection of dendritic cells (DC) delivers encoded antigen to MHC class I and II molecules, causes DC maturation, and induces a potent human in vitro primary immune response. Weissman D, Karikó K, et al. J Immunol. 2000;165(8):4710-7.

32　Nucleoside-modified VEGFC mRNA induces organ-specific lymphatic growth and reverses experimental lymphedema. Szőke D, Karikó K, Weissman D, et al. Nat Commun. 2021;12(1):3460.
